

*CIAMI Onlus, the Italian association of Crigler-Najjar patients and their families, organises the 2016 yearly meeting, focussing all attention on some specific issues.*

*This springtime meeting will inform the international community about new discoveries in current and future therapeutic options, such as the gene therapy project that is now very close to becoming a reality.*

*The meeting will be streamed live on the Internet with simultaneous translation into English and the option to join in from anywhere.*

*Because of this, the Meeting is open to doctors and families of people who suffer from a condition such as the Crigler-Najjar syndrome that is so rare that it is ill-known, if not completely unknown.*
